Great Basin Freelance

Request from a [photographer](#) for their new book, 2 maps:

1. **Base/Reference Map**

- a. Outline of Great Basin hydrological area, Basin and Range province area and 'land a bit north of the Snake River Plain'
- b. '...[precedents] have too much color and text... maybe no place names at all, less color and more legible'

2. **Narrative Map**

- a. Plotting locations corresponding to text/photographs in the book
 - i. Using the created basemap in part 1
- b. Points and numbers, legend communicating its meaning

“Keep this all *simple* and *elegant* while trying to *carry all the information*”

Number 53, Winter 2006

Mapping and Imagination in the Great Basin: A Cartographic History
 By Richard V. Francaviglia.
 Reno, Nevada: University of Nevada Press, 2005.
 xviii, 231 pp., maps, photographs, notes, bibliography, cartobibliography
 \$44.95. Hardbound
 ISBN 0-87417-609-3.

*Reviewed by Russell S. Kirby, PhD, MS, FACE
 University of Alabama at Birmingham*

In this engaging, well-illustrated monograph, Richard Francaviglia traces the evolution of spatial knowledge of the region now known as the Great Basin in the western United States as documented through careful examination of the archival cartographic evidence.

and the spatial knowledge thereby transferred.
 Grand historiographic generalizations such as the Turner thesis do not guide Francaviglia's discussion, nor are there persistent myths that he seeks to refute through his careful analyses of the cartographic record of the region. His study contributes significantly to the monographic literature on the history of exploration and discovery, and it integrates research by historical geographers, cartographers, and historians of science with primary source materials and map interpretation.

One interesting observation Francaviglia puts forward is that the Spanish knowledge of the Great Basin region was probably far greater than the information divulged to European cartographers prior to the 19th Century. It is curious that, although this study is strongly grounded in extensive archival research in major libraries and holdings of map collectors, the

Great Basin - Projection

We need a **regional** coordinate reference system for the **American Southwest** in order to produce the projected image the author needs.

The [U.S. UTM](#) grid thankfully has a zone (11) which covers most of the Great Basin Region. Let's use that!

Recall an American regional CRS will use the [NAD83 Datum](#) as its basis for measurement.

Jack, *how is the **Datum** created in the first place?*

From lecture: [Surveyors](#), [benchmarks](#), and intensive labor.
Thank your local [Land Surveyor](#).

Making the Great Basin Map

Lab Logistics

1. Foundations

- a. I made a **scribe-pro walkthrough** detailing how I went about experimenting with basemap data to find the most appropriate projection.
- b. Tip: When beginning a project. Download a basic data set like Natural Earth, and play around with projections to get the image you want.

2. Exploratory

- a. Pick **two prompts** from the worksheet, pursue a third if you really love mathematical surfaces
- b. Submit on the worksheet: a **screenshot** of the data you chose, and a **quick sketch** of a projection diagram (*see image to the right*).

3. Reflection

- a. Write responses in reflection of engaging with technical mapping work for the first time.

Entanglement

“Although many cartographers still prefer to focus solely on the graphical and mathematical shortcomings of Peters’ work, others have been receptive enough to take on board the message that there is merit in considering different world views,” (Vujakovic, 66).

In most GIS/Spatial Analysis courses, your main priority is to align all the CRS systems to ensure accurate analysis. Which is paramount for that scale of work.

In cartographic discourse, you’re asking instead: *what **world** am I creating through projection?*
