Kogonada

Kogonada's film essays for the Criterion Collection.

All curated in preparation for his first major feature film production.

Kogonada, *Columbus* (2017)

Influence of studying Ozu and Wes Anderson emerges in the film's photographic structure

Precedents

What you choose to study, what you choose to intentionally *look at*.

This is what you make. This is your *way of seeing*.

Love these 1970s satellite-derived maps that are explicitly like "Eh, who knows? Clouds and satellite bits were blocking the view."

Emphasizes the fact that these maps are representations of single moments in time.

Jack - Sidewalk Q-20 Maps

Legislative maps stating the existence of a change to the sidewalk geometry in urban space. Filed under the index 'Q-20' for infrastructure documents. For San Francisco Public Works.

History and Contexts

ORDINANCE No. 1061.

(Approved December 18, 1903.)

REGULATING THE WIDTHS OF SIDEWALKS.

Be it ordained by the People of the City and County of San Francisco as follows:

SECTION 1. The widths of sidewalks on streets and avenues in the City and County, unless otherwise fixed by the Board of Supervisors, shall be as follows:

On all streets and avenues less than forty (40) feet wide, one-fifth the widths of the streets of which they form parts.

Guide to the San Francisco Better Streets Plan

& RELATED AMENDMENTS
TO SAN FRANCISCO'S MUNICIPAL CODES

ADOPTED DECEMBER 2010

Walkways, Sidewalks, and Public Spaces

13.1 Purpose

No single design feature can ensure that a streetscape will be attractive to pedestrians. Rather, the best places for walking combine many design elements to create streets that “feel right” to people on foot. Street trees, separation from traffic, seating areas, pavement design, lighting, and many

gain access to and depart from signalized intersections in an orderly and efficient manner.

Minimum Width of Sidewalks

Sidewalks require a minimum width of 5.0 feet if set back from the curb or 6.0 feet if at the curb face. Any width less than this does not meet the minimum

Maps emerge in the context of larger infrastructure procedures and city planning policies.

Visual Analysis

CARTOGRAPHER'S NOTE:

Q-20 MAPS DRAFTED BY THE BUREAU OF SURVEYING AND MAPPING ARE DERIVED FROM CONCEPTUALLY APPROVED ENGINEERING DRAWINGS SUBMITTED TO THE DPW PERMITS GROUP.

THE PEDESTRIAN INFRASTRUCTURE VISUALIZED ON THESE DOCUMENTS ARE CONSTANTLY UNDERGOING CHANGE, AND DOES NOT REPLACE A SITE INSPECTION AND/OR FIELD SURVEY. THE CURB DATA SHOWN HEREON IS NOT A LEGAL REPRESENTATION OF ANY OF THE FEATURES IN WHICH IT DEPICTS, AND DISCLAIMS ANY ASSUMPTION OF THE LEGAL STATUS OF WHICH IT REPRESENTS.

FOR PRECISE DIMENSIONS, CONSTRUCTION MATERIALS, APPROVED STREETSCAPE ELEMENTS AND UTILITY SYSTEM OVERLAP, PLEASE CONTACT DPW PERMITS GROUP FOR THE FINAL APPROVED SET OF PLANS (PW-231E-00501).

CURVE TABLE			
CURVE #	LENGTH	RADIUS	DELTA
C1	5.86'	10.00'	33°33'27"
C2	11.71'	20.00'	33°33'26"
C3	17.70'	20.00'	50°42'10"
C4	8.85'	10.00'	50°42'10"
C5	12.87'	20.00'	36°52'13"
C6	6.51'	10.00'	37°19'10"

ADA CURB RAMPS

Deconstruction of the map's design choices and techniques.

Visual Analysis

“Drawing the City”
- Jack Moorehead

How the techniques are in conversation with historical precedent.

Entanglement

Is this the only way to represent sidewalks in urban space?

How do the sidewalk maps contribute to the construction of a certain experience or perspective in space?

Can we think of a better visual language for narrating the complexity of the sidewalk? Is it a problem of data classification or visual design?

Where do the maps fit into the larger conversation of city planning issues?
